## **DETAILED ACTION**

## Claim Objections

Claims 16 and 17 are objected to because of the following informalities: Claims 16 and 17 recite limitation that are disclose in the respective independent claims. Appropriate correction is required.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9-14, 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hickernell US Patent 6,201,457 in view of Watanabe et al US Patent 6,633,748.

Hickernell disclose in figure 2 a notch filter comprising a delay line 26, a capacitor 24 connected in parallel with the delay line 26. Hickernell also state that the notch filter can be realized in a ceramic substrate. Inherently the capacitance of the capacitance will effect the delay line.

Hickernell is shown to teach all the limitations of the claims with the exceptions of the capacitor being adjustable or a variable capacitor or a varicap diode, a mulitlayered structure formed comprised a plurality of dielectric layers, a plurality of ground conductors disposed on the dielectric layers and a pair of ground conductors disposed opposite the transmission line and the capacitance being provided by electrodes formed on the dielectric layers.

Application/Control Number: 09/583,171

Art Unit: 2817

Watanabe et al disclose in figure 1, notch filters 3a, 3b, 4a and 4b disposed on a multilayered structure comprising a plurality of dielectric layers 11a-11m and ground electrodes G1 -G4. (See figures 3a-3h and 4a-4f)

One of ordinary skill in the art at the time of the invention would have found it obvious to substitute the general ceramic structure of Hickernell with the detailed multilayer structure of Watanabe et al since examiner takes notice of the equivalence of the general ceramic structure and the multilayered structure for their use in the transmission line art and the selection of any of these known equivalent would be within the level of ordinary skill in the art.

One skill in the art would have found to obvious to make the capacitor adjustable in order to adjust the frequency of the notch filter. The adjustable capacitor can be realized through the use of a variable capacitor or varicap diode.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kimberly E Glenn whose telephone number is (703) 306-5942 ((571) 272-1761 after January 13, 2004). The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on (703) 308-4909. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-7724.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
